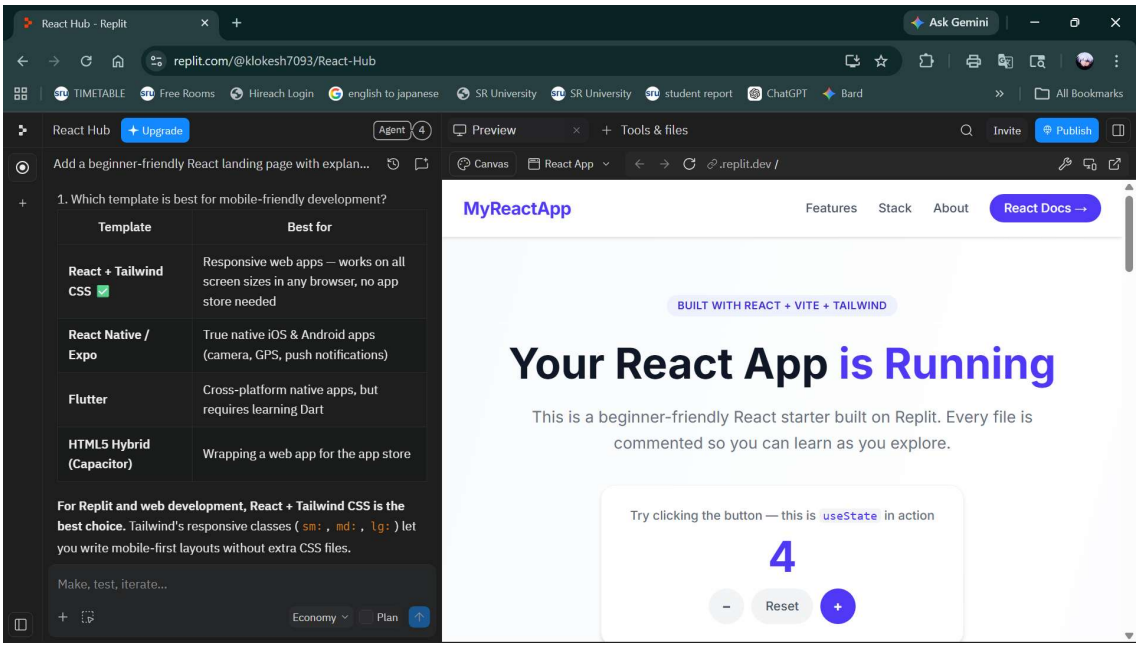
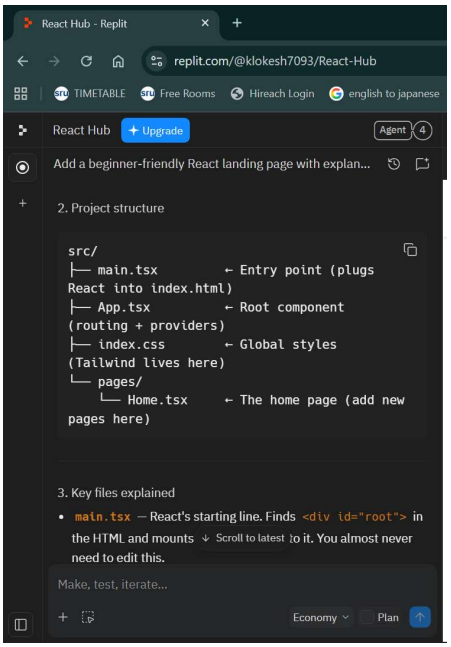
AIAC Assignment – 24.5

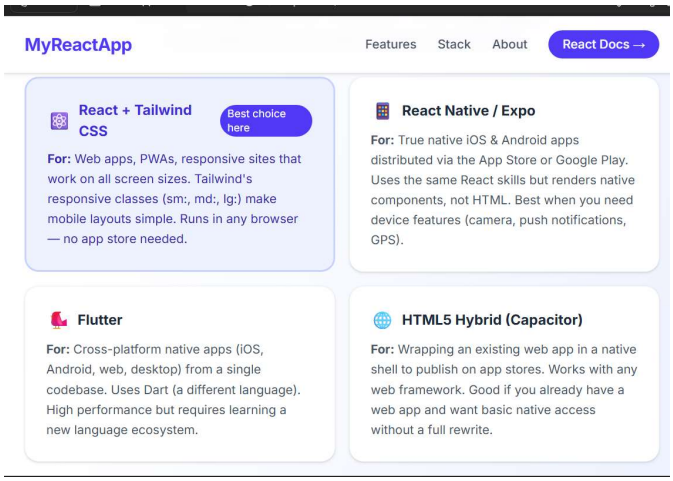
K.Lokesh	2303A51201	B21

Task 1 – Environment Setup

- Create a free **Replit account**.
- Explore the mobile app development templates (React Native/ Flutter / HTML5 hybrid).
- Install required packages or dependencies in the Replit environment.

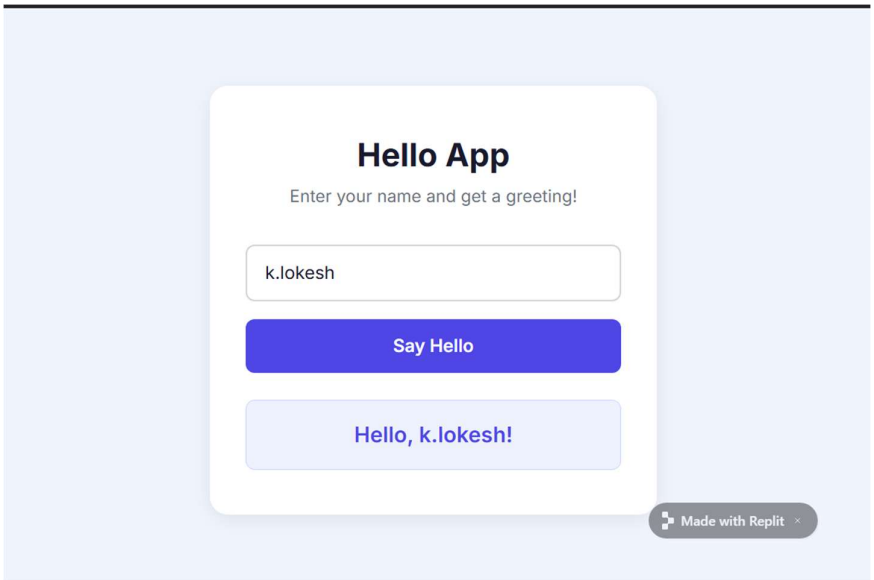






Task 2 – Basic Mobile App

- Build a simple **"Hello App"** that displays:
- App Title
- User's Name (input field + button)
- Greeting message dynamically updated.
- Use AI assistance to generate boilerplate code and explain structure.



App structure — `App.tsx`

Everything lives in a single functional component called `App`. There are two pieces of state:

- `name` — tracks what you type into the input field in real time (controlled input via `onChange`)
- `greeting` — stores the greeting message and starts empty; it's set when you click the button

State handling

Both are created with `useState`. React automatically re-renders the component whenever either value changes, so the UI always reflects the current state.

Event handling

- `onChange` on the input calls `setName(e.target.value)` on every keystroke, keeping `name` in sync
- `onClick` on the button calls `handleGreet()`, which reads the current `name` and calls `setGreeting(...)` to display the message
- Pressing Enter also triggers the greeting via `onKeyDown`

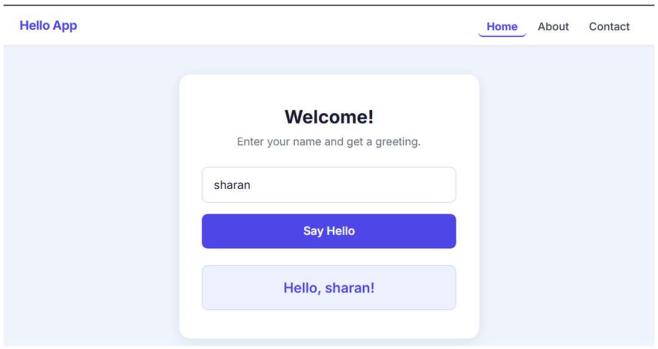
Dynamic greeting

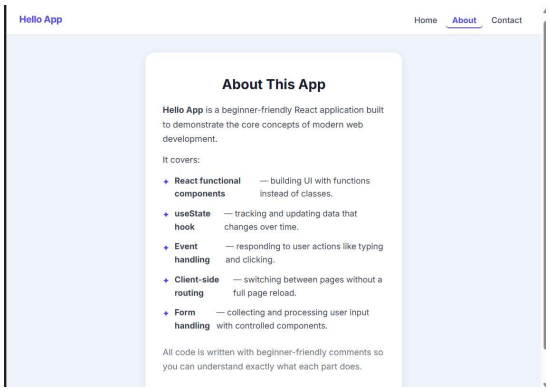
Scroll to latest

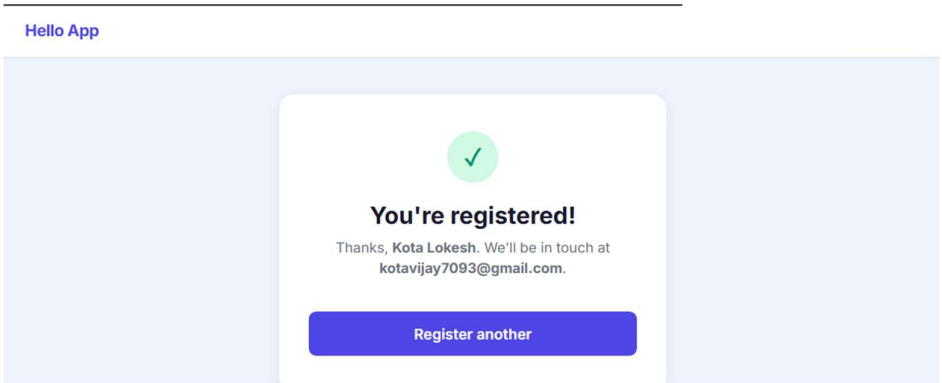
The greeting block is conditionally rendered with `{greeting && <div>...</div>}` — it

Task 3 – Adding Features with AI Assistance

- Enhance the app with:
- **Navigation bar** (Home, About, Contact).
- **Form handling** (e.g., user registration page).
- **Basic styling** with CSS or React Native styles.
- Ask AI in Replit to **add inline documentation** for each function.

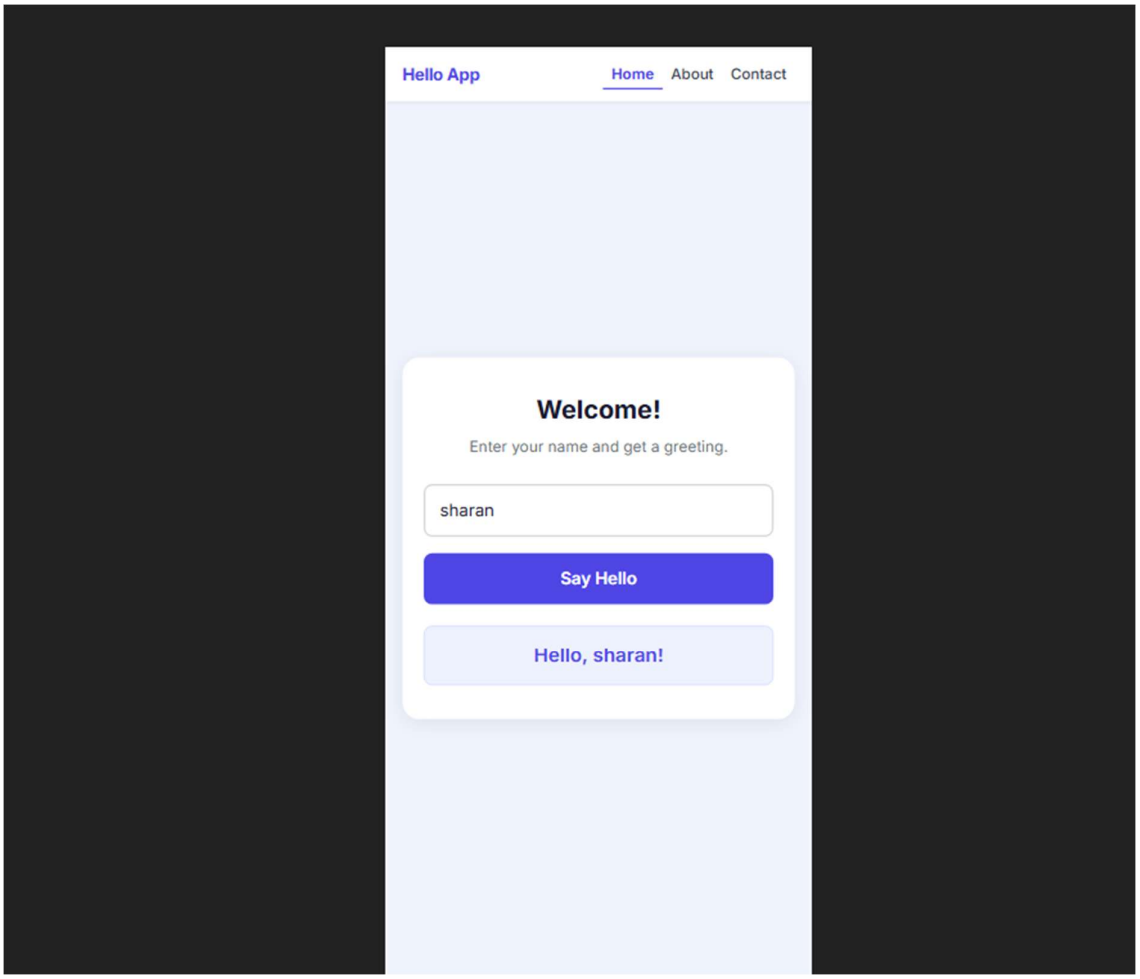






Task 4 – Testing on Mobile

- Run the app in Replit's mobile preview mode.
- Test responsiveness on different screen sizes.
- Fix UI alignment issues with AI suggestions.



Task 5 – Deployment

- Deploy the app using **Replit hosting** or export it to a mobile framework (like Expo for React Native).
- Share the deployment link with peers for testing.
